

vaginal probe

SPECIFICATIONS

- 3 hemispherical electrodes, 3 individual plugs
- Connection: 2mm female banana plug
- Diameter: 2.7 cm
- Length: 12.5 cm
- Weight: 21g
- Nickel-free

PRESENTATION

Its special pad shape makes it easy to position in the vagina, guaranteeing a perfect fit.

The proximal part fits easily into the posterior vaginal area and the body of the probe, while its body provides anterior intracavitary stability.

PRACTICAL BENEFITS OF THE PROBE

1 - Electrical stimulation - SEF

- Classic bilateral R & L stimulation
- Unilateral R or L stimulation
- Proximal or distal stimulation
- Individualized pacing

2 - Biofeedback - BFB/EMG

- Recording of electrical muscle activity in supine or orthostatic position
- Selective D or G recording by turning the probe around

THERAPEUTIC APPLICATIONS OF THE PROBE

1 - Electrical stimulation - SEF

- Direct perineal muscle deficiency
- Phasic and/or tonic perineal muscle strengthening
- Unilateral analgesic treatment
- Deep analgesic treatment

- Unilateral hypotonicity
- Sphincter urethral insufficiency
- Lowered bladder hyperactivity
- Lateral and punctual perineal proprioceptivity

2 - Biofeedback - BFB/EMG

- Global or lateral perineal awareness
- Detection and measurement of bilateral or unilateral muscular insufficiency

- Checking progress of bilateral or asymmetric recovery
- Control of reflex and voluntary locking under stress

NB: each banana plug has 2 cups and 1 bulge, corresponding to the electrode on the probe (1, 2, 3).
